

Figure 10 is a contour plot showing the relationship between m (x-axis, ranging from 0.0 to 1.0) and M (y-axis, ranging from 0.0 to 1.0). The plot displays the value of the expression $\epsilon^S(0.25, m, M)$ as a color gradient, ranging from yellow (low values) to red (high values). A blue diagonal line represents the boundary where $M = m$. A blue line segment is labeled $\epsilon^S = 0.25$. The plot is annotated with the text "M is 0.25-DP" and " $M \circ S$ is $(\epsilon^S(0.25, m, M))$ -DP".
